Boarding House Management System

Offline · SQLite · Admin Only

An offline management system designed to manage rooms, tenants, payments, and boarding house records. Built as a personal project to practice full CRUD workflows, local data persistence, and a clean, dashboard-style mobile UI — all without needing an internet connection.

OCCUPIED

0

OVERDUE

01 Splash Screen

Offline app launch — loads the local SQLite database on startup.

02 Home Dashboard

Monthly income, occupancy, tenant count, and recent payments at a glance.

03 Rooms Management

Add, edit, and track room status — occupied, vacant, or reserved.

04 Tenant Records

Full tenant list with room assignment, contact number, and status.

05 Settings & Data

Local database info, data reset tools, and offline-only confirmation.

SUMMARY

What this project covers

01 Room Management

Add, edit, delete rooms; track occupied / vacant / reserved status and monthly rate.

02 Tenant Records

Store tenant info, assigned room, occupancy count, and contact number.

03 Payment Tracking

Log monthly payments per tenant and mark them as paid.

04 Overdue Alerts

Flags tenants who haven't paid for the current period.

05 Fully Offline

Runs entirely on a local SQLite database — no internet or server required.

06 Single Admin Mode

No login system; designed for one boarding house owner/admin.
